

CAUTION!

SPECIAL ASSEMBLY INSTRUCTIONS

Failure to follow the instructions will void the warranty on this pump.

This replacement pump is designed to service both the first and second design HT 4100 cooling system. The difference between these systems is that the first design (1982) incorporates a reservoir to pump hose with a flow control check valve. The second design does not require this outlet. When using this pump on earlier models (first design), bypass the line from the water pump and purchase a new radiator cap with the reservoir nipple in it. Connect the line to this nipple in the cap. (See illustration)
